Maya Torres

Applied ML / NLP Engineer · Berlin, Germany · maya.torres@example.com

PROFILE

Applied machine-learning engineer focused on language systems. I work mostly in Python and have shipped transformer-based services used by internal product teams. Recent work has included Hugging Face Transformers, PyTorch, MLflow and Google Cloud; I am also comfortable working with SQL-backed datasets and Dockerized services.

EXPERIENCE

Senior Applied ML Engineer / Verity Labs, Berlin | Feb '22 → Jul '25

• Led development of a multilingual ticket-routing model, fine-tuning BERT-family models with PyTorch and Hugging Face Transformers.

• Tracked experiments and model artifacts in MLflow; production services ran in Docker on Google Cloud Run.

• Worked with product and support teams to define evaluation sets and analyze model errors.

Data Scientist — Kestrel Media, Madrid | 2019–2022

Built text-classification and ranking prototypes for editorial search. Used Python, scikit-learn and SQL for experimentation and offline evaluation; later migrated several prototypes to PyTorch.

EARLIER / SELECTED PROJECT

Volunteer NLP project (2021): created a small Spanish-language intent classifier and exposed it through a FastAPI endpoint for a non-profit helpline.

EDUCATION

Universidad Politécnica de Madrid — M.Sc. Artificial Intelligence (2017–2019). Thesis: neural text classification for short customer messages.

University of Granada — B.Sc. Telecommunications Engineering, completed 2017.

LANGUAGES

Spanish: native. English: professional working proficiency (C1). French: conversational / B1.

TOOLKIT SNAPSHOT

Python · PyTorch · Hugging Face Transformers · scikit-learn · MLflow · Docker · Google Cloud (Cloud Run) · SQL · FastAPI
